

Course Information Sheet

Club Drugs (1 education hour)

Course Description: Club drugs are a group of different chemicals used at dances, raves, and concerts. This mixed audio presentation and readings course examines three club drugs: MDMA, Ketamine, and GHB. The history, subjective effects, and side effects are discussed for each drug.

Course Objectives:

1. Define club drugs
2. Provide an overview of the three most common club drugs: MDMA, Ketamine, and GHB
3. Discuss resources for getting help and finding more information about club drugs
