

Course Information Sheet

Drugs, Alcohol, and HIV (0.75 education hour)

Course Description: This course explores the impact of a diagnosis of HIV/AIDS when combined with chemical usage. We will examine the effects on the immune system, potential drug interactions with treatment medications, and will provide basic information about HIV/AIDS. Additionally, we will examine some of the latest research, which highlights the state of science related to this area.

Course Objectives:

1. Examine the effects of chemicals on your immune system
2. Review basic information about HIV and AIDS
3. Consider which substances tend to be abused more than others
4. Evaluate who is at risk for HIV infection, along with how drug abuse contributes to transmission
