

Course Information Sheet

It's a Brain Disease Beyond a Reasonable Doubt
(1 education hour)

Course Description: This advanced course examines the impact of drugs as related to medical implications, economic implications, social implications, and addiction. Via explanation of brain toxicity, scientific research, and issues of comorbidity, information is provided that speaks to both nature and nurture issues. The course is filled with interesting statistics, graphs, and the latest research efforts. It is a fantastic scientific exchange of information.

Course Objectives:

1. Explain the medical, economic, and social implications of drug use/abuse and addiction
2. Describe the physiological impact of drugs on the central nervous system of the body
3. Discuss the priority areas for the National Institute of Drug Abuse (NIDA) to deal with drug use/abuse and addiction problems in the United States
4. List how these priorities are being addressed by NIDA
