Course Information Sheet

Substance Use and Driving: The Road to Disaster
(0.75 education hour)

Course Description: This course reviews the effects of using alcohol/drugs on driving behavior. Included is a discussion of behavioral driving domains that, if impaired, could have deadly consequences. Common substances detected in roadside driver surveys are identified and discussed. How these substances impact driving is also explained.

Course Objectives:
1. Identify and explain behavior domains that, if impaired, put drivers at risk for accidents
2. Identify drugs commonly used in vehicle accidents—their means of ingestion, common street names, and their effects on the body
3. Pinpoint the effect that each drug has on driving behavior
4. Explain the risks of drunk and drugged driving
